

Specification

Contestable Service Providers for Customer-Initiated Constructions

JEM-CUS_E-TP-100343

Version Number: 1.0

Date of Issue: 14 September 2026

Contents

1. Purpose	3
2. Contestable Service Accreditation	3
Appendix A – Design	4
Appendix B – Project Management	5
Appendix C – Construction	6

1. Purpose

This document has been produced to assist JEN customers with information on recent activity in the JEN contestable services market for customer-initiated construction of network assets; specifically what companies **may** be readily accredited to tender such services to.

The purpose of this document is to better enable JEN customers in initiating their tendering process, should they wish to undertake such contestable services.

2. Contestable Service Accreditation

The following companies have recently demonstrated competency and obtained JEN approval to undertake the contestable services of a customer-initiated construction project. Such services include design, project management or construction of:

- Connection assets
- Asset undergrounding/relocation
- Services to other distributors such as power transfer capability services and
- Public lighting

The specific services each company have recently been approved for are detailed in the attached appendices. All competency and accreditation requirements are outlined in the *Contestable Works Guideline (ELE-999-GL-EL-013)*.

This document does not confirm currency of JEN accreditation. This is due to various reasons outside JEN control such as a service provider company's staff turnover or their expired VESI compliance training. Customers and their agents are advised to verify the currency of this list with JEN prior to proceeding with tendering.

For any enquiries relating to contestable service accreditation, please contact the JEN Commercial team at routinprojects@jemen.com.au.
